Framework / library
Client / external system
HTTPS · JSON
resume link or file · job offer text · role
FastAPI microservice · sap-evaluator-api
STAGE 1 · INPUT
FastAPI routers · also GET /health and GET /roles
POST /evaluate/score
concise score for SAP
used by the portal
POST /evaluate/full
categories, evidence,
GitHub projects
POST /evaluate/csv
result appended to
evaluations.csv
POST /evaluate/upload
resume sent as a file:
PDF, DOCX, TXT,
MD
FastAPI runtime
Pydantic request models
CORS · request logging
Swagger UI /docs
STAGE 2 · TEXT EXTRACTION
every format becomes Markdown text
→ Google Drive
Google Drive fetcher
file id from the public link
Google Docs exported as PDF
format detected from bytes
PDF
PyMuPDF ·
pymupdf_rag
headings, lists kept
DOCX
python-docx
paragraphs, tables
TXT / MD
read as plain text
Libraries
requests
PyMuPDF, pymupdf4llm
python-docx
STAGE 3 · STRUCTURED PARSING
one LLM call per resume section
→ OpenAI API
basics
work
education
skills
projects
awards
JSON Resume
Pydantic model
JSONResume
six sections
6 LLM calls · Jinja2 prompts · JSON schema output · one retry
GitHub link searched in the profiles, website, projects and raw text
LLM client
OpenAI-compatible API
JSON schema output
retry with backoff
STAGE 4 · GITHUB ENRICHMENT
if a GitHub profile is found
→ GitHub REST API
→ OpenAI API
Profile & repositories
public profile
up to 100 repositories
Project type
open source if several
contributors, else personal
author vs total commits
Top 7 projects
chosen by the LLM for the role
README excerpt of each
GitHub REST API
token authentication
users, repos
contributors, readme
STAGE 5 · RUBRIC SCORING
role software_engineering_intern
→ OpenAI API
Role rubric
role.json: 4 categories,
limits
criteria.jinja
system_message.jinja
Evaluation prompt
offer + resume + GitHub data
fairness: name, gender,
university, grades, location
ignored
GPT-4o-mini
temperature 0.1 · strict JSON
schema
per category: score and evidence
bonus, deductions, strengths,
improvements
Validation
Jinja2 templates
Pydantic answer model
invalid answer rejected
STAGE 6 · SCORE COMPUTATION & OUTPUT
the language model judges, Python computes the final score
Python score computation
caps: open source 35, personal projects 30, production 25, technical skills 10
bonus ≤ 20, minus deductions
total kept in [−20, 120]
percentage of the 100-point base
Recommendation
STRONG_HIRE ≥ 80 %
HIRE ≥ 65 %
CONSIDER ≥ 50 %
DO_NOT_HIRE < 50 %
JSON response
score, percentage
recommendation
key_strengths
areas_for_improvement
Response models
